

GSIP Simulation Report

Run: FinancePack portfolio (in-process, no Temporal)
Mode: domain_pack | Status: completed
Pack: finance-pack | Created: 2026-08-27T10:01:55

Your Question

Maximize portfolio returns while keeping risk low

What This Simulation Did

The engine evaluated 8 scenarios. Each scenario applies a different combination of policy levers to a deterministic model, scores the outcomes, and ranks the best options. The LLM is used only to set up the problem and write this report - not once per scenario.

Answer / Recommended Solution

In-process execution of finance-pack without Temporal. 8 scenarios were simulated by the domain-pack simulate() method. This is not a Temporal-orchestrated run.

Executive Summary

In-process execution of finance-pack without Temporal. 8 scenarios were simulated by the domain-pack simulate() method. This is not a Temporal-orchestrated run.

Results Summary

Scenarios simulated: 8 / 8
Best judge score: 0.743
Mean judge score: 0.502
Finalists promoted to higher fidelity: 5

Best Scenario Detail

Scenario ID: fin-006
Judge score: 0.743 (good)
Optimal lever settings:
- weights: {'SPY': 0.6781336274180493, 'BND': 0.18526034912463749, 'GLD': 0.12970944141596505, 'CASH': 0.0068965820413483545}
- rebalance_frequency: monthly
Outcome metrics:
- total_return: 0.827 %
- annualized_return: 66.833 %
- sharpe_ratio: 6.782
- max_drawdown: 0.088 %
- volatility: 0.656 %
- sortino_ratio: 9.331
- final_value: 182656.053 USD

Top Ranked Alternatives

Rank	Score	Key levers / metrics
1	0.743	total_return=0.827, annualized_return=66.833, sharpe_ratio=6.782
2	0.630	total_return=0.460, annualized_return=13.161, sharpe_ratio=6.335
3	0.599	total_return=0.285, annualized_return=4.788, sharpe_ratio=2.936
4	0.574	total_return=0.261, annualized_return=4.057, sharpe_ratio=3.781
5	0.546	total_return=0.174, annualized_return=2.071, sharpe_ratio=4.404
6	0.524	total_return=0.092, annualized_return=0.846, sharpe_ratio=2.519

7	0.360	total_return=0.028, annualized_return=0.210, sharpe_ratio=0.661
8	0.039	total_return=-0.059, annualized_return=-0.347, sharpe_ratio=-0.856

Important Notes

Results depend on the registered domain pack fidelity and evidence base. Review benchmarks and assumptions before acting on recommendations.
