

GSIP Business Report

General Simulation Intelligence Platform Business Model, Market, and Strategy

Document version: 1.0 Classification: Business Last updated: February 2025

Executive Summary

The General Simulation Intelligence Platform (GSIP) is a decision-laboratory product that

turns natural

1. Product Overview

1.1 What GSIP Is

GSIP is a B2B-oriented decision support and simulation platform that:

- Accepts user goals in plain language (e.g. Maximize portfolio returns while keeping

risk low or R

1.2 Core Value Proposition

- Accessibility: Non-experts can pose questions in natural language instead of writing

optimization

2. Business Model

2.1 Positioning

GSIP is a platform that can be:

- Licensed to enterprises (on-prem or private cloud). - Offered as SaaS (usage-based or

seat-based).

2.2 Revenue Streams (Potential)

1. Subscription / SaaS - Tiered by runs per month, scenarios per run, or seats. - Premium

tiers: more c

2. Domain packs and verticals - Core packs (e.g. Finance, Spatial) included; additional

verticals (he

3. Professional services - Custom domain packs, rubric design, benchmark curation,

integration w

4. Evidence and governance - Document ingestion, evidence packs, and audit-ready reports

as a differen

2.3 Target Customers

- Primary: Mid to large organizations in regulated or high-stakes domains: - Financial

services: Po

- Secondary: - Consultancies and advisory firms that need to run many scenarios and show

methodology

2.4 Why They Would Pay

- Time savings: No need to hand-build objective functions and scenario generators. - Risk

reduction: A

3. Market and Competitive Context

3.1 Alternatives Today

- Generic AI chatbots (e.g. ChatGPT, Copilot): - Pros: Natural language, fast. - Cons:

Can fabricat

- Traditional simulation/optimization tools (custom code, MATLAB, dedicated simulators):

- Pros: Full c

- Specialized vertical tools (e.g. portfolio optimizers, policy models): - Pros: Deep in

one domain.

3.2 Differentiation Summary

| Dimension | GSIP | Pure AI Chat | Traditional Sims |

|-----

4. Go-to-Market Considerations

4.1 Entry Paths

- Land with one vertical: e.g. start with finance (portfolio/risk) or policy

(spatial/envi

4.2 Sales Motion

- Product-led: Free or low-cost tier for small runs; upgrade when limits or compliance

needs grow.

4.3 Messaging

- Ask in plain language; get answers from real simulations, not AI guesses. - Every

number is co

5. Potential and Scalability

5.1 Use Cases (Current and Near-Term)

- Finance: Portfolio optimization, risk/return trade-offs, backtest exploration

(FinancePac

5.2 Extensibility

- New domains: New domain packs (same contract); no change to core pipeline. - New

rubrics/benc

5.3 Scalability (Technical)

- Compute: Ray scales workers; Temporal handles durable workflows and retries. - Data:

PostgreSQL

5.4 Revenue Potential (Illustrative)

- SMB / team: Lower price per seat or per run; volume through product-led growth. -

Enterprise: H

6. Risks and Mitigations

6.1 Product and Technical

- Formalization quality: Keyword/heuristic formalization may miss nuance; optional LLM

improves bu

6.2 Market and Business

- Adoption: Decision-makers may be used to spreadsheets or legacy tools. - Mitigation:

Strong dem

6.3 Compliance and Trust

- Regulatory: Sector-specific rules (e.g. finance, healthcare) may require certifications

or controls. -

7. Strategic Options

7.1 Product Strategy

- Option A Vertical focus: Double down on one vertical (e.g. finance or policy), ship

more packs

7.2 Go-to-Market Strategy

- Option A Product-led growth: Free or low-cost tier; self-serve; upgrade path for limits

and enterpri

7.3 Open Source and Community

- Open core: Core pipeline and SDK open; closed domain packs or enterprise features. -

Full open: B

8. Success Metrics (Suggested)

- Product: Run completion rate, scenarios per run, time to first result, reproducibility

test pass rat

9. Conclusion

GSIP addresses a real gap: organizations want the ease of natural-language interaction

but cannot a
